

Eco-sustainable tourism

Our company, with a view to improving the efficiency of the environmental and energy management system, has planned a series of structural interventions. Help us with our project with small tricks that are essential in the success of the path to environmental protection:

- We change towels daily; throw on the floor only those you want replaced;
- The disposable soap set has been replaced with dispensers so as to limit the volume of waste and wasteland dispersion of products into the environment;
- Remember to turn off unnecessary lights: efficient use of available lighting helps to significantly reduce electricity consumption;
- While brushing your teeth or shampooing, turn off the faucet when water is not needed;
- Our Hotels support a separate waste collection campaign, help us by using the appropriate colored bags for each type of waste (blue for plastic and white for paper);
- Always close room windows if the heating and/or air conditioning system is running;
- Remember to always turn off electrical devices before falling asleep;
- Set the indoor temperature based on your needs, using the appropriate controllers; remember that the temperatures to ensure physiological well-being in the rooms should be around 20°C in the winter period and 6°-7°C lower than outside (however, no higher than 26°C) in the summer period;
- Report to us any inefficiencies (leaks, malfunctions, etc.);
- Recommend other useful measures for the protection of the environment and contribute to our campaign.

Respect for the environment can continue outside our Hotels:

- Buy local food and drinks, even the simple bottle of water; transportation of goods causes significant pollution in terms of emissions and resources use;
- Equip yourself with a water canteen: Rome is full of drinking fountains from which you can draw fresh water. In this way you will avoid the use of plastic bottles;
- Use the dumpsters available in different parts of the city and continue our waste separation campaign;
- Inquire, when planning your visit to a specific area, about the possibility of moving around using public transportation;
- Go around the city using the most ecological vehicle available; for example, visit the historic center by renting a bicycle at the appropriate points;
- Share your eco-tourism experiences with other guests and leave us your advice on our social networks.

Thank you for your precious participation in our project.

The head of Environmental Management
